## Asbestos Inspection Report

### **Project Location:**

Former Shawsville Elementary School  
4390 Riffe Street  
Elliston, VA

### **Prepared For:**

Montgomery County  
Department of Economic Development  
755 Roanoke Street, Suite 2H  
Christiansburg, Virginia 24073

### **Prepared By:**

  
Robin H. Liebal/Ryan Blose/Robby Jones  
Asbestos Inspectors

# **TABLE OF CONTENTS**

## **SCOPE OF WORK**

### **ASBESTOS INSPECTION**

- SAMPLE SUMMARY
- LABORATORY REPORT
- PHOTOS
- APPLICABLE LICENSES

## SCOPE OF WORK

HDH Technical, Inc. was contracted by Montgomery County Department of Economic Development to provide an asbestos inspection at the former Shawsville Elementary School, 4390 Riffe Street, Elliston, VA. The inspection was conducted by personnel trained and licensed in accordance with the regulations of the Environmental Protection Agency (EPA) and the Commonwealth of Virginia. This inspection was performed using current EPA AHERA standards. This protocol was used for the determination, sampling and analysis of suspected Asbestos Containing Materials (ACM).

## ASBESTOS INSPECTION

An inspection of the former Shawsville Elementary School was performed May 21 & 22, 2015, by representatives of HDHT. The objective of this inspection was to determine the location of suspect asbestos-containing building materials (ACBM) currently located on the interior and exterior of this structure that may be disturbed by upcoming demolition activities.

As the sample summary indicates, the following suspect materials were reported to be asbestos containing by the laboratory:

- **FLOOR TILE – 12x12 BROWN & ITS ASSOCIATED BLACK MASTIC**
- **SHEET ROCK JOINT COMPOUND**

These Friable (Joint Compound) and Non-Friable (floor tile & mastic) asbestos containing materials should be removed prior to demolition activities at this location. Removal should be performed by licensed, contract personnel using approved methods.

This information should be provided to all contract personnel for their use in meeting current OSHA requirements. If any additional suspect materials are identified during the course of the project, the contractor is to immediately stop work and contact the Owner for further direction.

*Friable Asbestos Material:* Material when dry, may be crumbled, pulverized or reduced to powder by hand pressure and includes previously non-friable material after such previously non-friable material becomes damaged to the extent that when dry is may be crumbled, pulverized, or reduced to powder by hand pressure.

*Non-friable Asbestos Material:* Material that contains asbestos in which the fibers have been locked in by a bonding agent, coating, binder, or other material so that the asbestos is well bound and will not release fibers during any appropriate use, handling, demolition, storage, transportation, processing or disposal.

### **Disclaimer**

The final report cannot be reproduced, except in full, without written authorization from SanAir. Fibers smaller than 5 microns cannot be seen with this method due to scope limitations. The accuracy of the results is dependent upon the client's sampling procedure and information provided to the laboratory by the client. SanAir assumes no responsibility for the sampling procedure and will provide evaluation reports based solely on the sample and information provided by the client. This report may not be used by the client to claim product endorsement by NVLAP or any other agency of the U.S. government.

For NY state samples, method EPA 600/M4-82-020 is performed.

Polarized- light microscopy is not consistently reliable in detecting asbestos in floor covering and similar non-friable organically bound materials. Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos containing.

### **Disclaimer**

The final report cannot be reproduced, except in full, without written authorization from SanAir. Fibers smaller than 5 microns cannot be seen with this method due to scope limitations. The accuracy of the results is dependent upon the client's sampling procedure and information provided to the laboratory by the client. SanAir assumes no responsibility for the sampling procedure and will provide evaluation reports based solely on the sample and information provided by the client. This report may not be used by the client to claim product endorsement by NVLAP or any other agency of the U.S. government.

For NY state samples, method EPA 600/M4-82-020 is performed.

Polarized- light microscopy is not consistently reliable in detecting asbestos in floor covering and similar non-friable organically bound materials. Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos containing.
